

# The Transformative Power of AI/ML in Media with AWS

**Abbas Nemr**

Sr. AWS Solutions Architect

# Presenter Profile

- AWS Media thought leader
- **14 years** of industry experience
- Master degree in Telecom
- Multiple AWS certifications including **AI/ML specialty**
- AWS **Architecture Leader** for “GogoTV in-flight live service” to stream live “HEVC” content to airplanes
- In my free time, I like grafting and growing fruit trees

Sr. Solutions Architect

# Agenda

- M&E Industry Challenges
- Why AI/ML in Media
- AI/ML on AWS
- What's Next?

# Key Industry Trends and Challenges

**Create New  
Customer  
Experiences**

**Scale Internal  
Processes**

**Realizing The  
Value Of Data**

**Respond to  
new business  
models**

# AI/ML Solutions and Use Cases

## Create New Customer Experiences

Content personalization and recommendation

Fan engagement experiences

Automated highlights and clipping

## Scale Internal Processes

Content localization

Metadata extraction and tagging

Moderation and compliance

## Realizing The Value Of Data

Content personalization and recommendation

Shoppable Videos and Shoppable Ads

## Respond to new business models

**Generative AI:** virtual assistants, semantic search, video summarizations, scene understanding, knowledge bases...

# Media Analysis, Metadata Generation, and Tagging

By automating the creation of a rich metadata index, machine learning can help meet growing user requests.

.....  
**NASCAR** enhances metadata with **Amazon Rekognition**, **Amazon SageMaker**, and **Amazon Transcribe**, saving thousands of hours of manual search and serving up more relevant video to fans.

# Increased Fan Engagement

The predictive powers of machine learning allow for new and unique ways to engage audiences, enabling fans to feel like they're inside the action.

.....  
During **Formula 1** races, 120 sensors on each car generate 3 giga bytes of data, and 1,500 data points are generated each second. Formula 1 uses **Amazon SageMaker** to help transform that data into insights that fascinate its 500 million global fans.

# Improving the Customer Experience

## Personalized content recommendations

- Deliver real-time, curated experiences
- Predict consumer actions and intent
- Keep customers engaged by delivering more of what they want

.....

To remain competitive, today's M&E companies need to personalize content for all users, even those who are just signing up. With **Amazon SageMaker**, **iHeartMedia** analyzes registration information to create a personalized listening experience in real time, reducing churn and improving the user experience.

# Scene Understanding

Machine learning helps identify actors, players, and animated characters. It can also detect specific activities (such as goals, fouls, car crashes, and battles)

- Automated Highlights
- Video semantic search
- Ad Insertion placement detection

.....  
**Disney** uses ML and deep learning on AWS to understand scenes in animated videos, enabling creators to quickly search content using natural language queries.

# Media Subtitling and Localization

AI and ML can help automate the creation of subtitles, captions, transcriptions, and translation of content, reducing the number of person hours needed to complete these otherwise labor-intensive tasks.

.....  
**SyncWords**, an AI-powered service that provides automated captioning and translations, uses **Amazon Translate** to deliver real-time translation and multi-language subtitles to live broadcasting in 40 languages.

# Content Moderation, Compliance, and Quality Control

Machine learning allows for moderation of user-generated content at scale, enabling automatic detection and censoring of inappropriate content.

.....  
**Amazon Rekognition** gives **Flipboard** a robust moderation taxonomy to prevent unwanted content more efficiently, intercepting an average of 63,000 images daily with few false alarms.

# The AWS ML Stack

Complete set of Machine Learning capabilities

# AWS AI/ML Services for Media

## Amazon Personalize

Create real-time personalized user experiences faster at scale

## Amazon Rekognition

Automate your image and video analysis with machine learning

## Amazon Transcribe

Easily add high-quality speech-to-text capabilities to your applications and workflows

## Amazon Translate

Fluent and accurate machine translation

## Amazon Bedrock

The easiest way to build and scale generative AI applications with foundation models

## Amazon SageMaker

Build, train, and deploy ML models for any use case with fully managed infrastructure, tools, and workflows

## Amazon Comprehend

## Amazon Polly

## Amazon Textract

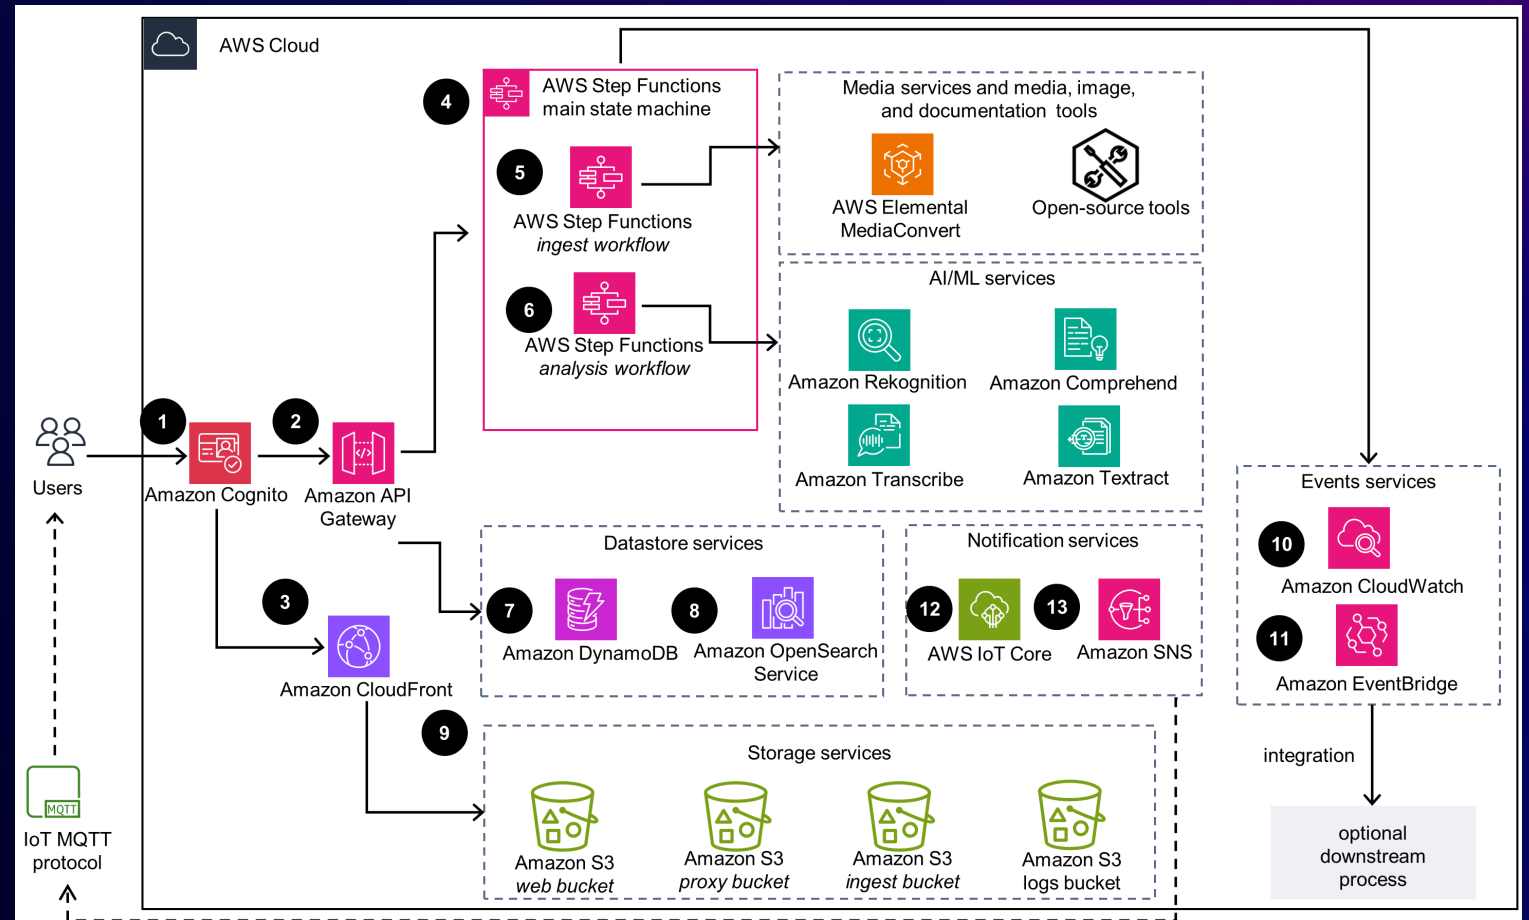

# PartyRock

# AWS Media2Cloud Solution

- Migrate your digital assets to the cloud.
- Solution created with Well-Architected best practices in mind.
- On-click launch template.
- Advanced capabilities: Scene detection, Shoppable Videos...

[Blog Post](#): AWS Media2Cloud helps Formula 1 migrate to the cloud and manage its growing asset library.

# Purpose-built Solutions for M&E

## Media2Cloud on AWS

Automated video asset ingestion and metadata tagging solution.

## Content Localization on AWS

Create subtitles for your video-on-demand (VOD) content.

## Media Insights on AWS

Development framework for applying machine learning services to media workflows.

AWS Media Intelligence homepage

# PartyRock - Generative AI Playground

Learn generative AI fundamentals. No coding required.

The screenshot shows the PartyRock web application interface. On the left is a dark sidebar with navigation links: 'PartyRock', 'Sign in', 'Discover', 'Partyrock Guide', 'What's new', and 'Give feedback'. The main content area has a light green header with the text 'PartyRock' and 'Everyone can build AI apps'. Below this, there are several interactive elements: a 'Haiku Creator' button, a 'Weird Tour Guide' button, a 'Podcast Generator' button, and a 'Build your own app' button. A central 'App builder' box contains the text 'Generate a 5-7-5 syllable haiku poem and a visual image based on user input.' To the right, a preview window shows a 'User Input' field with the text 'winter', a 'Generated Haiku' section with the text 'Here is a 5-7-5 syllable haiku poem about winter: Snowflakes falling down Blanketing the ground in white Winter's cold embrace', and a 'Visual PROMPT' section displaying a generated image of a snowy landscape with trees and mountains under a sunset sky.

# How to Get Started?

- Identify which use cases may be a fit for your business needs.
- Understand how AI/ML fits into your roadmap
- Determine whether you want to build or leverage a partner solution.
